

TC-831

Press Distribution System

“The Ultimate In Professional Press Audio Distribution”

If you need to provide high quality press feeds or need a portable high quality audio distribution system, this is the unit you have been looking for. The TC-831 can be switch configured to be an 8 stereo output, or 16 mono output audio distribution system. Each output XLR features individual, balanced active drivers on each output. Configured in the mono mode, the unit can sum to mono from a stereo source. Each XLR output can be switch selected between a -40 dbm, mic level, or +4 dbm balanced line level signal. Outputs are not affected by phantom power that might be present on the connected users equipment. The XLR outputs can be jumper pre configured to have pin 1, either connected thru to system ground or totally floating. Input connectors have a pin 1 lift switch. Each input has looping male and female XLR input connector that provides for “stacking” of multiple TC-831's for expanded distribution requirements. Multi-color front panel bar graph LED's display calibrated and peak level. Featuring an all aluminum enclosure, the TC-831 weighs in at a mere 5 pounds ! Standard 19” rack mounting provides easy installation for fixed facilities or mounting in protective road cases for portable applications.

- Weighs ONLY 5 lbs !
- Configurable for 8 stereo or 16 mono outputs
- Balanced bridging inputs with ground lifts
- Recessed front panel master gain set
- Each output, switch selectable either mic or line level
- Active balanced individual output drivers
- LED bar graph level indicators
- Not affected “T” or phantom power applied to outputs
- Powers from mains voltages anywhere in the world *
